## environmental

As we work towards our net zero target following our timed action plan, materials play an important part of reaching that goal, introducing new sustainable materials where possible, whilst still balancing cost and performance.

### **MFC**

Our MFC's are manufactured with 80% recycled content (40% recycled wood and 40% by-products of the sawmill) and are 100% recyclable. MFCs are sourced from Egger in the UK, FSC accredited and processed in our partner factory in West Yorkshire. MFC's offer a great long-lasting performance at an excellent price point (now with 2 cost bandings for the best price).

### **Laminate**

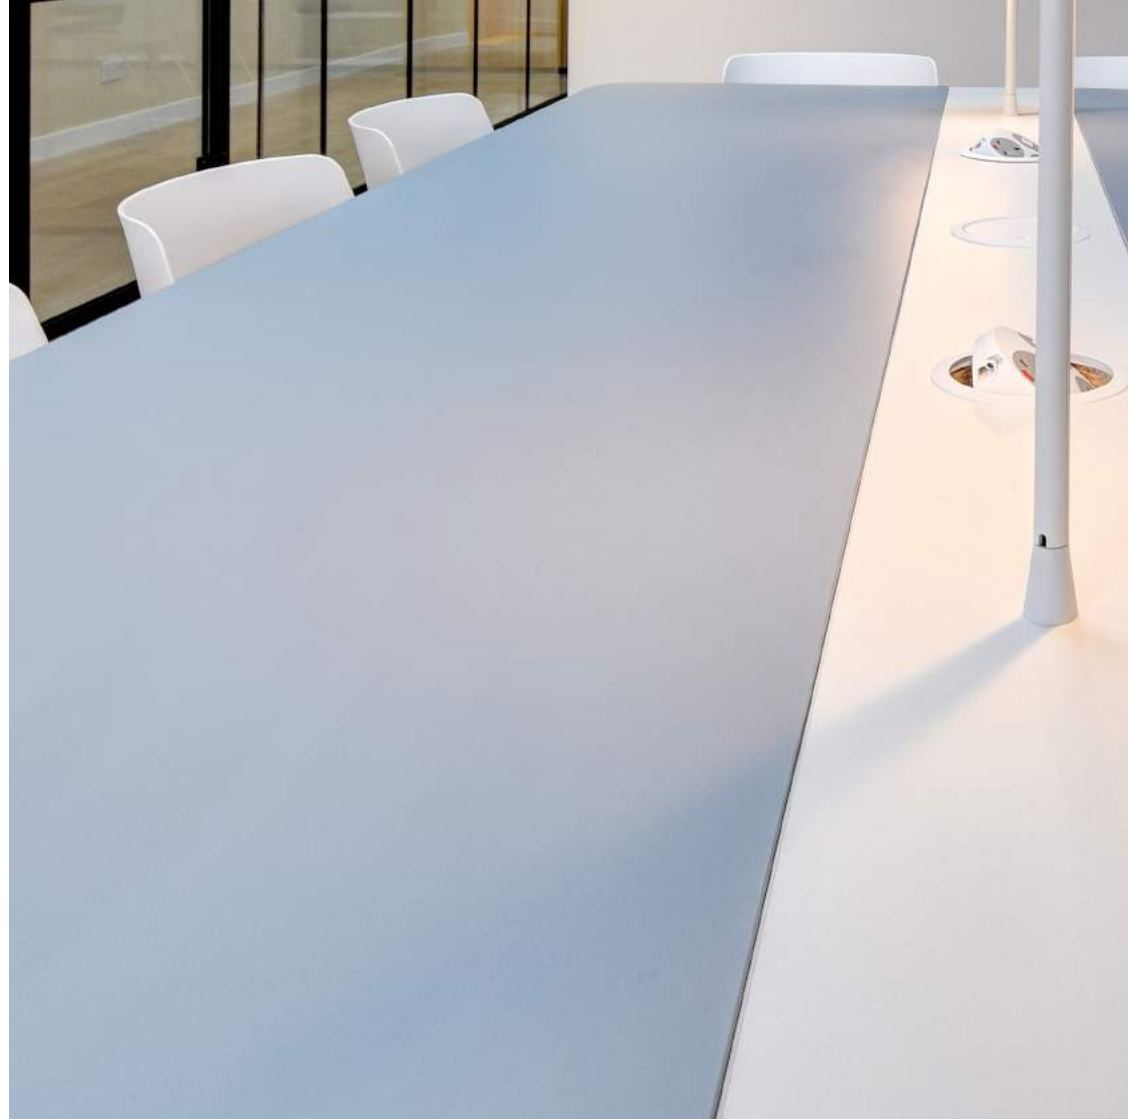

Our laminates are also sourced from Egger and match the same contemporary colour palette as our MFCs. The laminates are bonded to a Kronospan MDF core and are processed in our partner factory in West Yorkshire. Our laminate and board is 100% recyclable and offers a extremely hard-wearing worksurface with the option to create an edge profile in a variety of designs.

### **PerfectSense Laminate**

Our PerfectSense laminates are once again sourced from Egger and are designed to create a wallet-friendly option to Fenix. The laminates are bonded to a Kronospan MDF core and are processed in our partner factory in West Yorkshire. PerfectSense Laminate and board is 100% recyclable and offers a super-matte smooth anti-fingerprint worksurface in 6 heritage-inspired colours.

### **Biocarbon Laminate**

Biocarbon is a carbon-neutral high pressure solid grade laminate with a carbon neutral footprint. It is antibacterial and anti-microbial as standard, making them great for lockers. We process Biocarbon in our partner factory in West Yorkshire. Biocarbon offers great eco credentials and a contemporary colour palette.

#### **Fenix Laminate**

Fenix is carbon neutral and is bonded to a Kronospan 0% recycled MDF core. Like all our woods, it is processed in our partner factory in West Yorkshire. Fenix is 100% recyclable, along with the substrate, and has anti-fingerprint technology and can be thermally repaired on-site offering fantastic long-lasting performance.

#### **Fabrics**

Our fabrics are sourced from Camira, Kvadrat, Moons, InLoom and Panaz, with 54% of our standard range offering featuring an environmental feature, from reduced water use to 100% natural fibres or 100% post-consumer recycled content. We aim to increase the percentage of sustainable fabrics within our range whilst offering our customers choice, performance and a variety of price points.

#### **Steel**

Our steel features 30% recycled content and is sourced from Welsh mills. Steel is 100% recyclable without losing quality or strength. Using finishes from Akzo Nobel (sourced in the UK) to maintain high quality, we powder coat all our steel in our Yorkshire factory. The paint track has had many environmental upgrades over the years, with the installation of electric ovens planned to help us reach Net Zero. Powder paint finishes use no solvents in the drying process and are easy to recycle reducing waste and resources.

#### **Plastic Shells**

Our standard chair shells feature up to 30% recycled content with the introduction of a new 100% recycled and recyclable chair for 2024. All our shells are 100% recyclable. The Flexiform chair range is assembled in our Yorkshire factory.
